

1. **ZO Approval Restriction**

- Each ZO can approve/reject/hold only for the JEs who are mapped under that ZO.
- A ZO must not be able to view or approve requisitions of JEs assigned to any other ZO.

2. **HO to ZO Fund Allocation**

- Fund Requisitions raised by a ZO to HO must be processed **Work Order-wise**.
- HO should allocate funds against the respective Work Order.

3. **JE Fund Approval & ZO Balance**

- When a JE's Fund Requisition is approved by the ZO, the approved amount must be automatically deducted from that ZO's available fund balance.

4. **JE Transfer Between ZOs**

- If a JE is transferred to another ZO, the transfer should be allowed only after all of the JE's pending Fund Requisitions have been completed (Approved, Rejected, or Cancelled).
- No pending requisition should remain under the previous ZO after the transfer.

5. **Excess Fund Return to HO**

- HO should have the authority to request the return of excess funds from any ZO.
- The fund transfer back to HO must require confirmation/acceptance from the respective ZO before it is completed.

6. **User Mapping Database**

- A dedicated **User Mapping** module/database must be maintained for JE–ZO relationships.
- Each JE must be mapped to only one active ZO at a time.
- The system should maintain the mapping history, including transfer dates and previous assignments, for audit and tracking purposes.

7. **Work Order Mapping**

- A dedicated **Work Order Mapping** module should be maintained to define which Work Orders belong to which ZO and JE.
- Fund Requisitions, Approvals, Expenses, and Reports should be validated based on this mapping.
